PRESS RELEASE

Baar / Neu-Isenburg, 18 August 2026

InfoGuard further expands cyber security offering for 1&1 Versatel business customers

InfoGuard and 1&1 Versatel are expanding their partnership to include cyber security. As part of the collaboration, InfoGuard will make its comprehensive cyber security expertise and security portfolio available to 1&1 Versatel's business customers – ranging from Cyber Defence and Managed Detection & Response to Incident Response, Penetration Testing and Security Consulting.

The increasing severity of the cyber threat landscape is creating growing challenges for companies seeking to securely operate distributed IT infrastructures comprising cloud services, hybrid working models, as well as IoT and OT environments. At the same time, regulatory requirements and the increasing professionalisation of threat actors are adding further pressure to act. Against this backdrop, demand is growing for integrated solutions that combine connectivity, cyber security expertise and operations from a single provider.

Through the partnership, 1&1 Versatel is expanding its business customer portfolio to include InfoGuard's cyber security services. This gives companies access to comprehensive security expertise and professional services designed to sustainably protect their digital infrastructure.

Comprehensive cyber security expertise from InfoGuard

The following InfoGuard solutions and services are now also available through 1&1 Versatel:

- **Cyber Defence:** 24/7 Managed Detection & Response (MDR), SOC, CSIRT and Incident Response services. InfoGuard's own Cyber Defence Centers in Germany and Switzerland enable continuous monitoring, analysis and rapid response to cyber threats. The SOC services are ISO 27001 certified and audited in accordance with ISAE 3000 Type 2. InfoGuard is also a BSI-qualified APT Response service provider.
- **Managed Security Services:** Operation and protection of security and network infrastructures – reliably and continuously, with the aim of reducing the workload of internal IT and security teams.
- **Penetration Tests & Security Consulting:** Systematic identification of vulnerabilities through penetration testing and Red Teaming, as well as strategic consulting, risk assessments and support in meeting regulatory requirements such as NIS2 and DORA.

Bringing security and connectivity together

It is becoming increasingly clear that modern IT security and secure connectivity complement each other effectively: based on a high-performance and protected network underlay, the consistent protection of IT and cloud environments is becoming increasingly important. By combining connectivity and security services through a single provider, 1&1 Versatel makes it significantly easier for customers to integrate both areas and ensure comprehensive, end-to-end protection.

The offering is particularly aimed at companies with demanding information security, availability and compliance needs, as well as organisations required to comply with regulatory frameworks such as NIS2 or DORA. They gain access to a comprehensive security portfolio that combines prevention, detection, response and strategic consulting – helping them strengthen their long-term cyber resilience.

“The increasing automation and professionalisation of cyber attacks – particularly through the use of AI – is presenting companies with ever greater challenges. What is needed today are security solutions that combine protection, transparency and rapid response capabilities. With 1&1 Versatel, we have a strong partner at our side with outstanding infrastructure and network expertise. Together, we create genuine added value for our customers by holistically combining modern cyber security expertise with high-performance communications solutions and helping them sustainably strengthen their cyber resilience.”

Daniel Heinzig, Chief Sales Officer, InfoGuard Deutschland GmbH

“Many companies today operate highly interconnected IT environments with a constantly growing attack surface. At the same time, they often lack the internal resources required to consistently implement and operate security measures. InfoGuard strategically complements our portfolio with proven expertise in Cyber Defence, Managed Detection & Response and Incident Response. Together, we provide our customers with holistic support – from secure, high-performance infrastructure to the professional detection and defence of cyber attacks. In doing so, we enhance security, reduce complexity and help companies successfully address increasing regulatory and security requirements.”

Ahmet Yayan, Chief Operating Officer, 1&1 Versatel
