PRESS RELEASE

Baar, 16. March 2021

InfoGuard expands into the German and Austrian Market and sells Tanium's endpoint management and security platform

InfoGuard AG, the Swiss expert in Cyber Defence, Incident Response & Recovery and comprehensive Cyber Security, today announced its plans to expand into the German and Austrian markets together with Tanium, the provider of endpoint management and security solutions. The managed security service provider, which has its own ISO 27001 certified and ISAE 3000 Type 2 audited Cyber Defence Center in Switzerland, is pursuing its growth strategy by now offering its Security Operations Center (SOC)-as-a-Service services throughout the DACH region.

InfoGuard has leveraged its own ISO 27001-certified and ISAE 3000 Type 2 audited Cyber Defence Center to already win a German financial institution as its first SOC-as-a-service customer. It has also supported several German companies in security incidents with its Incident Response Team (CSIRT) and forensic analyses. With this expansion, InfoGuard is responding to an increasing number of customer inquiries from Germany and Austria, thus covering the entire DACH region. As was already the case in Switzerland, as part of the expansion customers from Germany and Austria now also have the opportunity to access InfoGuard's comprehensive services as well as Tanium's endpoint management and security platform.

Tanium and InfoGuard's partnership has been in place since December 2015 when InfoGuard became Tanium's first MSSP partner in Europe. InfoGuard's Endpoint Detection Response Service (EDR-as-a-Service), offered since 2018 and based on Tanium's endpoint management solutions, enables customers to secure and manage their technology systems at scale from a central location. As a leading security specialist, InfoGuard relies on Tanium's solutions because they provide real-time visibility into network environments, accelerates incident response, and thus significantly advances enterprise security.

Stefan Thomann, Chief Sales Officer at InfoGuard comments: "We are happy to be one of the partners in Europe to now offer Tanium's leading endpoint management & incident response solutions as a Managed Security Service throughout the DACH region. This is another important step in our long-standing and successful partnership with Tanium."

"Tanium is the ideal partner for our Cyber Defence Service to help our existing and new customers in Germany, Austria and Switzerland to efficiently detect security incidents and respond to them from our Cyber Defence Center in Switzerland," added Ernesto Hartmann, Chief Cyber Defence Officer at InfoGuard.

After entering the German and Austrian markets, InfoGuard will focus on its core competencies in Finance and Industry, as this is where it has already gained many years of experience in Switzerland.

"We see with our customers how difficult it has become to meet cyber security and compliance challenges. Key reasons for this are the increased complexity IT teams are facing due to the majority of employees moving to remote working and cyber attacks becoming more sophisticated," explains Christoph Volkmer, VP of EMEA Central at Tanium. "On top of this, training cybersecurity experts or finding them in the market has also become a challenge. That's why we see the trend of customers outsourcing their cybersecurity to specialists like InfoGuard. And that's precisely why it's essential for us that our customers in Germany can also benefit from these Tanium-based first-class services."
