Detect cyber-attacks and react quickly

InfoGuard launches Endpoint Detection Response (EDR) as-a-Service powered by the Tanium Platform

The current growth of cyber-attacks and technology-based disruption shows that, in addition to preventive measures, rapid detection and response are becoming increasingly important. This is why InfoGuard is strengthening its partnership with Tanium, one of the global leaders in cybersecurity. InfoGuard will be the first partner in Europe to offer EDR-as-a-Service powered by Tanium. The services will be provided from InfoGuard's Cyber Defence Centre in Switzerland.

EDR-Service available from InfoGuard

InfoGuard provides a number of their core technologies to their clients including response, detection and SOC based services. With the new partnership, enterprise-grade EDR is now available to small and medium-sized enterprise (SME) customers through InfoGuard's service, which will provide threat analysis and threat intelligence using the Tanium platform. In addition, organisations can leverage the InfoGuard EDR-as-a-Service powered by Tanium to gain a comprehensive overview of their endpoints and increase their business resilience.

Tanium gives the world's largest enterprise and government organizations the unique power to secure, control and manage millions of endpoints across the enterprise within seconds. With the speed, scale and simplicity of Tanium's platform, security and IT operations teams have visibility on the state of endpoints at all times to more effectively protect against modern-day disruptions and realize new levels of business resilience.

"We are thrilled to announce Tanium as the newest technology partner for our managed security services in Switzerland," said Thomas Meier, CEO at InfoGuard. "Tanium Core plus Threat Response product is an ideal foundation to detect and respond in a highly effective and efficient way against cyber threats. We are delighted to partner together to help some of Europe's most prominent brands achieve improved business resilience."

John Taylor, Vice President EMEA Channels, Tanium, comments: "InfoGuard is one of the leading security specialists across Europe and provides solutions as a service across multiple verticals in Switzerland. With the new InfoGuard EDR as-a-service offering powered by Tanium, customers have an opportunity to gain a single point of visibility and control to secure and manage technology systems at scale."

Tanium's leading technological approach

Tanium's architecture turbocharges security and operations tasks so that actions previously taking hours or even days can be accomplished in seconds. With the Tanium platform, security and IT operations teams can ask any question about their environment, retrieve accurate and complete data, and quickly take any corrective action needed directly on the endpoint.

Tanium's platform provides a detailed overview of a cyber-attack and all endpoints in a matter of seconds and regardless of the size of the corporate network. Organisations are able to pinpoint where an attack has taken place, how the malware has spread or how the attacker has moved through the network, which endpoints are affected and how to react, and do so quickly. A further advantage is that when a security incident is detected, the technology for processing and correction is already rolled out. This is why InfoGuard consciously uses Tanium's solution for incident response cases, and also uses it in the daily operation of its own Cyber Defence Center.

InfoGuard is the first Tanium partner in Europe that can offer this solution in the form of an EDR-as-a-Service from its ISO 27001 certified Cyber Defence Centre in Switzerland. To learn more please join us at our joint event on October 4, 2018 in Zurich, Switzerland. During this event we will be demonstrating the possibilities and advantages of the EDR service in more detail. [You can find more information on the website.](#)
