# PRESS RELEASE

Baar/Zug, May 30, 2023

## InfoGuard partners with Vulcan Cyber to bring complete Cyber Risk Management to DACH Region

**InfoGuard, the Swiss expert for cyber security and cyber defence, today announced a new partnership with Vulcan Cyber, developers of the cyber risk management platform for infrastructure, application and cloud vulnerabilities, in the DACH region. InfoGuard will deliver Vulcan Cyber vulnerability and asset risk management solutions for cloud-native infrastructure to enterprises organizations across Switzerland, Germany and Austria. Together, InfoGuard and Vulcan Cyber will help large security security teams orchestrate and automate cyber risk mitigation initiatives more efficiently and effectively than ever.**

Most enterprise cyber security teams use multiple vulnerability scanners for each attack surface. These tools generate an overwhelming volume of data forcing security teams to manually aggregate and correlate scan data with asset data to identify the cyber risk that matters most to the business. Vulcan Cyber has developed the industry's first unified cyber risk and security posture management platform built to specifically to address the most-common risk management challenges at scale. Vulcan Cyber helps businesses manage the full vulnerability remediation lifecycle to reduce risk and secure critical assets across application, cloud and IT environments. The platform orchestrates and automates the work of vulnerability remediation while measuring the efficacy of the program through configurable analytics.

"When you factor in cloud and application adoption, the vast scale of modern IT environments poses a significant security challenge that only grows more severe as time goes on. Vulcan Cyber allows our customers to take a holistic view of their cyber security posture through a central dashboard to strategically deploy automated resources to combat threats based on business-critical context unique to a given enterprise," said Stefan Thomann, Chief Sales Officer at InfoGuard. "Our partnership with Vulcan Cyber enables our customers to make strategic cybersecurity decisions based on business risk, an essential evolution for modern security teams."

"The modern attack surface continues to expand, and a more comprehensive, centralized approach to cyber risk management is essential," said Frederic Saulet, Head of EMEA for Vulcan Cyber. "Our partnership with InfoGuard AG will ensure users in the region will be able to prioritize and respond to cyber threats with precision based on business risk. The Vulcan Cyber risk management platform is used by these teams to proactively improve cyber security posture at enterprise scale."

The Vulcan Cyber platform integrates with more than 100 vulnerability scanners, asset, collaboration and remediation tools to orchestrate and track the cyber risk management and remediation lifecycle by correlating and prioritizing vulnerabilities, curating and delivering the best remedies, and automating mitigation processes at scale through the last mile of remediation.
