

VULNERABILITY MANAGEMENT SERVICE

Less attack opportunities for hackers

To address the constantly shifting threat environment, ongoing vulnerability testing and optimisation of the internal infrastructure should be mandatory for any company. This has already been made obligatory by some regulators. Often however, there is a shortage of time and human resources.

Our experts will help you with your individual issues throughout all phases, from design to implementation. We can also offer you operation as a standardised managed service from our ISO 27001 certified Cyber Defence Center (CDC) in Switzerland.

FROM DESIGN TO IMPLEMENTATION

Do you know which system is the weakest link in your environment? The attackers certainly do! That is why efficient and effective vulnerability management is crucial. The implementation is complex however as it involves technologies, people and processes.

How we can help you

- Demonstrate the benefits of effective vulnerability management
- Design and review of the architecture
- Analyse and design processes, including roles and responsibilities
- Evaluate suitable tools and service providers, for example as part of an invitation to tender
- Install, maintain and upgrade the vulnerability management environment
- Develop reports suitable for the relevant target group
- Offer further advice and support in accordance with individual needs

Your benefits of a collaboration with InfoGuard

- Comprehensive know-how in the areas of consulting, engineering, pentesting, security incident detection and forensics
- Experience from numerous client projects
- Certified partner for the world-leading Tenable vulnerability solution
- Support throughout the entire vulnerability management life cycle

STANDARDISED MANAGED SERVICE

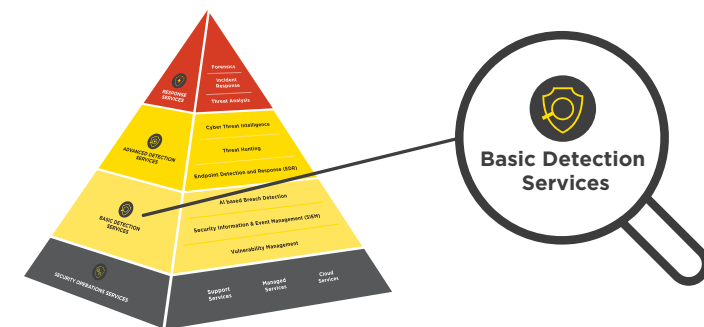

Do you want early identify potential vulnerabilities and continually minimise the risk? Then our vulnerability management as a service is the ideal solution. Our experts regularly scan and assess your IT systems, both externally and internally, in order to detect weaknesses and incorrect configurations. In the case of critical vulnerabilities, we alert you 24x7.

How our vulnerability management as a service can help you

- Regular vulnerability scan based on the world-leading Tenable solution for vulnerability-, configuration- and compliance assessment
- Classification of the weaknesses with recommended actions for targeted elimination
- Analysis by our Cyber Defence Center analysts and immediate alerts in the case of critical vulnerabilities, which are reachable via internet (24x7)
- Weakness report with vulnerability KPIs for assessment of the implemented measures
- Web portal access to vulnerability KPI dashboard
- Our experts will advise you about fixing vulnerabilities as required

Your benefits of the managed service

- You are always aware of the current threat situation of your IT systems, putting you one step ahead of your attackers
- You receive a highly-professional vulnerability management service from our ISO 27001 certified Cyber Defence Center
- Qualified experts, established processes and state-of-the-art technologies guarantee the targeted detection of threats within your IT systems and web applications
- Reduced response time after discovering system weaknesses classified as critical

INFOGUARD – YOUR PARTNER FOR VULNERABILITY MANAGEMENT
