Implementing information security where and when required

Today, companies are well aware of the importance of information security. Even so, many will not have sufficient personal or the expertise to address these issues. In many cases the expense and knowledge needed to build up Information Security Management or to maintain it do not justify a full-time position.

In these situations InfoGuard offers a Security Officer Service as part of its outsourcing programme.

Our security experts assume the functions of an Information Security Officer. Depending on customer requirements, specialists in the areas of organisation, risk and compliance, auditing and penetration testing, security awareness and engineering are put to work. Activities provided include: planning, introduction, coordination and monitoring tasks for all information security measures providing recommendations in regards to all aspects of data privacy and information security. Through this program clients receive professional

support on a strategic, tactical and operational level.

Our Security Officer Service encompasses the following tasks:

- Initial analysis in meeting legal guidelines while considering the business's processes and risk situation
- Set-up and maintenance of an ISMS according to ISO 27001/2 or a data privacy management system
- Development of a corporate-wide security policy together with directives and guidelines for secure operation of the IT infrastructure
- Design and implementation of business continuity and disaster recovery measures
- Implementation of risk analyses, formulating suitable security measures and defining IT and safety guidelines
- Set-up and examination of a suitable security architecture
- Authentication and access management
- Definition and implementation of measures to raise employee awareness
- Support in the planning and implementation of various security projects
- Coordination of projects in which information and data security are relevant
- Regular reviews of information security providing process and technology audits
- Reporting and quality assurance of client's service performance at the appropriate levels

InfoGuard – Your qualified partner for effective information security
